

STONE SIGHT

How it Works

STEP 1: During Seeding

The drill-mounted camera system captures detailed images of your field and stones as they roll out behind your drill.

STEP 2: Daily Data Upload

Your service provider will securely upload to the SoilMate platform for processing.

STEP 3: GPX Map Generation

Receive a clear and actionable GPX map of surface stones within 30 minutes to 6 hours.

STEP 4: Seamless Integration

Use the GPX map with your Garmin devices or smartphone for efficient stone-to-stone navigation and picking.

Additional Information

SAIRS Minimum Requirements

requirements may differ with other
service providers

Within 75 km of Yorkton,
Saskatchewan, a high speed fibre
optic internet service delivery point.

5000 acre minimum order (may be
combined with neighboring farms)

Environmental Considerations

Dusty conditions may require
occasional camera cleaning

Night imaging is currently not available
(expected future development)

Additional Services

SAIRS can assist with SoilMate
account setup and Garmin training
(included with Stone Pro)
